Time Limit: 1.0s    Memory Limit: 64M

---

## The Ultimate Typing Battle

---

Codemas Hackathon 2020 : Present 7

Keys are found in the form ``key{...}``. Find the secret key hidden in this problem and submit to judge as a text output.

So you're halfway through Codemas, feeling determined as ever. But on the path ahead, you see a dark, menacing figure, blocking the way. Your heart starts beating like a boombox as you inch closer and closer to make out the mysterious figure. Is it a goblin? A werewolf? You finally come close enough to identify the monster and... oh no. It's worse than you thought. Oh no. Oh no no no no **NOOOOO-**

**Mr. Naccarato.** You lock eyes with him and feel a wave of dread wash over you. The thoughts of confusing tests, tedious assignments, excruciatingly short lessons, and many other tragedies come flooding back at all once. It's too much. You desperately try to make a run for it, but it's too late now. In his captivating nasal voice, he demands you to beat him in a round of speed typing if you want your next present.

Phew. At least it's not Street Fighter.
