Time Limit: 2.0s **Memory Limit:** 64M

Thornhill Computer Club 2024 - April Contest - Problem 2

While typing out a cool username to use for the popular game League of Legends, **alan11** was unfortunately hit by a rock which caused him to type gibberish. He desired to have a bunch of **capital X**'s at the front of his username but they ended up in random places due to the impact. Write a program that removes all **X**'s in a given string of length L ($10 \leq L \leq 1000$) and moves them to the front, making them all uppercase.

Input Specifications

The first and only line of input will contain the string

Output Specifications

Print the corrected, **Cooler** username

Sample Input 1

```
forxtXnixteR
```

Sample Output 1

```
XXXfortniteR
```
